

Persona: Callie Quartile

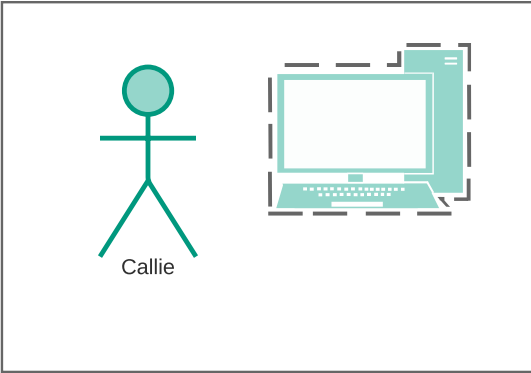

- Callie is a Data scientist
- Callie wants a data lake of all their information that she can explore to uncover new insight.

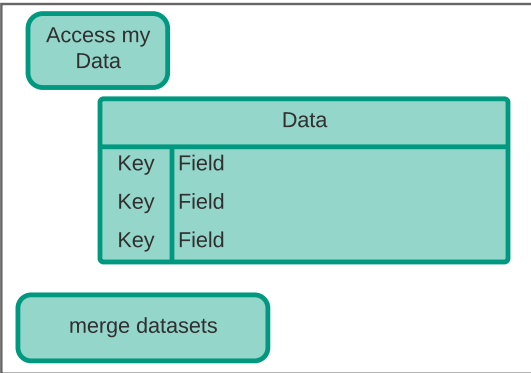

- Callie is brought to a customized screen based on her role
- This screen asks Callie what she wants to do

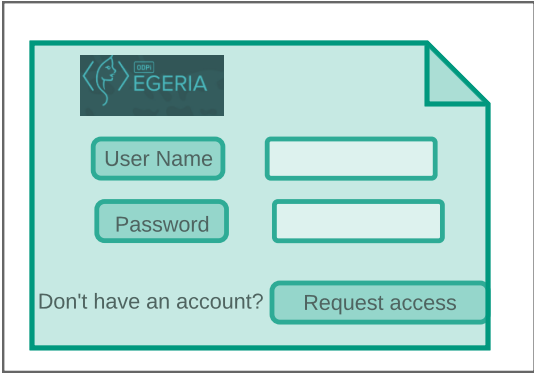

Scenario: Scenario name

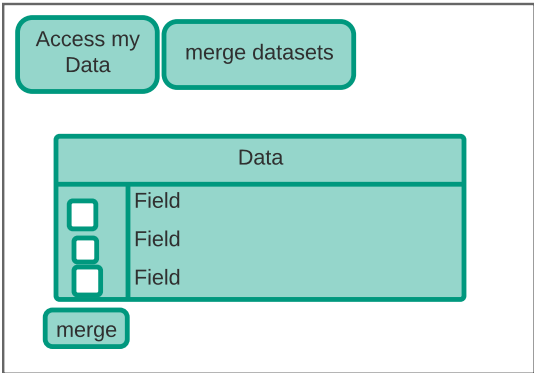

- Callie needs to get access to data. Each of the research team's systems is independent. Plus there are the reports from the clinical trials that mainly come in as notes from the medical staff

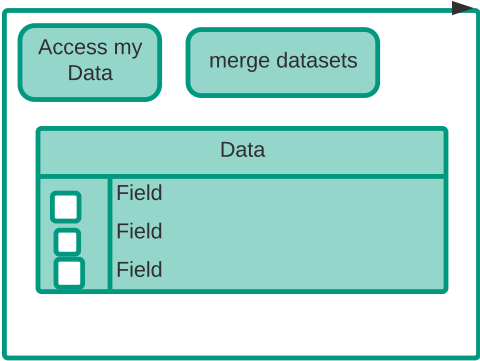

- Callie now has access to clickable data set that she already imported
- She can format those data sets by clicking on them

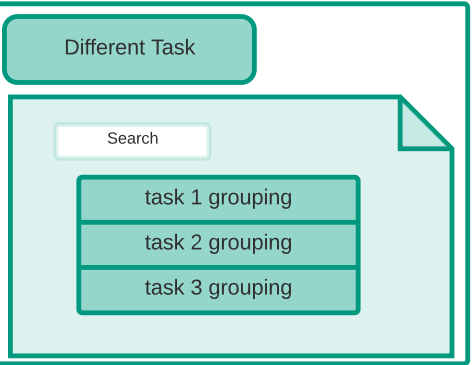

- Callie logs in with her credentials to access the data she needs
- 
- 

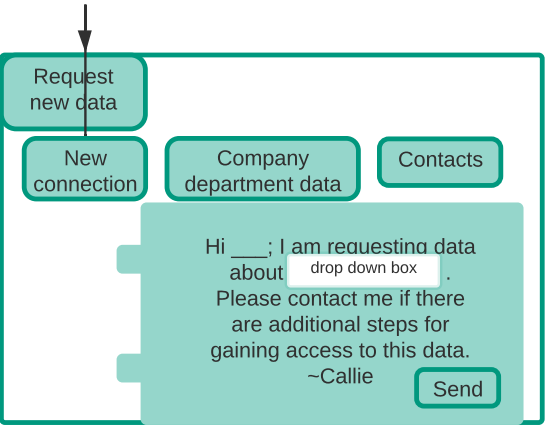

- Callie can check the data sets that either she created or that have been shared with her that she wants to merge
- she clicks on the merge button

- A prompt page appears and Callie is able to pick options as to how to merge the data sets including variables, appending, and any relationships in the data that she knows

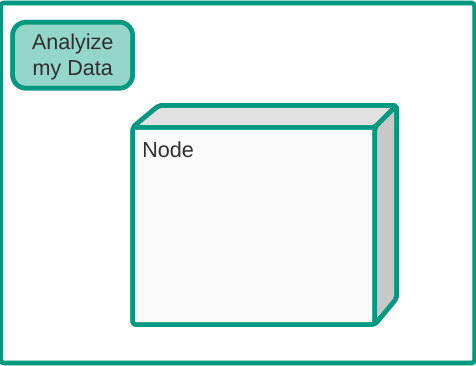

- Callie has to do something that is not common for her data scientist role. She clicks on the "different task" button from her home screen
- She is directed to a page where she can search for tasks or look for a task in a grouping if she is unsure about the exact task she wants to complete

- If Callie clicks on "request data" from her home screen, she is brought to a window where she can request a new connection, request info from a business or department, or directly ask a person for data
